EDUCATION

National University of Science & Technology (NUST)

Islamabad, Pakistan

Bachelor of Science in Economics

Relevant Courses: AI Product Management, AI Fundamentals, Data Analytics, Business Strategy, Project Management, Digital Marketing & Ecommerce

WORK EXPERIENCE

Think Agents — AI Product Manager

Jun 2024 – Present

- Owned AI product roadmap and shipped 6+ LLM-powered features Led AI product lifecycle end-to-end across 3 cross-functional teams (engineering, design, client success) — driving a 25% lift in qualified lead conversion, measured via Mixpanel over 90 days.
- Designed and delivered AI automation workflows using OpenAI APIs, n8n, and Make.com — eliminating 40% of manual effort in lead handling and reporting pipelines, reducing average task cycle time by 3+ hours per sprint.
- Built and managed product experimentation loops using Mixpanel analytics; defined success metrics and validated hypotheses across sprint cycles, improving cross-team decision-making speed by ~30%.
- Gathered Voice of Customer insights via structured user feedback sessions across 50+ interactions; translated findings into engineering-facing PRDs and user stories, accelerating iteration velocity across 3 agile squads.

First Women Bank — Business Analyst

Apr 2025 – Nov 2025

- Analyzed financial datasets to surface customer behavioral insights, producing 4 consecutive roadmap recommendations - 2 directly adopted into the bank's FYP 2025 digital product strategy and AI-readiness roadmap.
- Built AI-assisted data automation workflows integrating Excel analytics and collaboration tooling, reducing reporting and analysis cycle time by 30% and eliminating weekly manual data processing tasks.
- Defined structured data evaluation and model output validation frameworks, accelerating executive decision-making timelines from 2 weeks to 3 days across key product reviews.
- Aligned data insights with digital transformation OKRs, identifying 6 product improvement opportunities that strengthened the bank's data-driven product development maturity.

The Talent Output INC, USA — Creative Director

Jun 2021 – Apr 2024

- Led data-driven experimentation across acquisition funnels and user journeys — A/B tested 15+ campaigns globally — increasing market engagement by 25% through optimized positioning and segmentation strategies.
- Drove a 30% increase in qualified lead acquisition by defining conversion funnel requirements, applying customer analytics, and running structured A/B tests across multi-channel campaigns.
- Built KPI dashboards aligning cross-functional teams (marketing, product, creative) to measurable business goals, improving ROI visibility and reducing reporting time by 40%.
- Expanded market reach by 15% by leading stakeholder discovery and market research, converting insights into go-to-market strategies aligned with growth OKRs.

PROJECTS

Personal AI Data Analyst – [Link](#)

- Defined PRD, success metrics, and MVP scope for a self-serve AI analytics platform; reduced stakeholder time-to-insight by 70% and eliminated manual reporting workflows for non-technical business users.
- Architected end-to-end AI data pipeline using Python, SQL, and LLM analysis with RAG-based evaluation loops and prompt engineering chains — achieving production-grade output reliability across diverse datasets.
- Implemented model output validation and continuous improvement frameworks; translated AI-generated insights into structured product recommendations that accelerated business decision-making by 3x.
- Deployed MLOps-style evaluation loops to monitor model accuracy over time, enabling iterative prompt improvements without engineering dependency.

Cloud-Powered Text-to-SQL AI Application - [Link](#)

- Defined PRDs, roadmap, and stakeholder-aligned product vision for a Text-to-SQL application, reducing engineering dependency by 80% and enabling self-serve querying for non-technical stakeholders.
- Built and shipped a production Text-to-SQL app using Llama 3.1 + LangChain improved SQL generation accuracy by 30% through structured prompt evaluation frameworks and optimized inference pipelines to achieve <2s query latency at scale.
- Defined user stories around self-serve analytics and prioritized features (auto-upload, visualization, querying) that reduced analytics turnaround time by 70% from request to insight.
- Managed full product lifecycle from MVP concept to launch — including performance monitoring, scalability testing, and roadmap prioritization via JIRA and structured stakeholder reviews.

SKILLS

Technical: LLMOps, Prompt Engineering, RAG Implementation, OpenAI APIs, LangChain, N8N, Make.com, Power BI, Python, SQL

Product: Roadmapping, AI Product Strategy, MVP Design, User Stories, Agile/Scrum, Wireframing, Figma, Mixpanel, JIRA, Trello

Soft Skills: Strategic Thinking, Problem Solving, Cross-functional Collaboration, Risk Management, Stakeholder Communication
